

Pollinator Health

BEE AWARE. BE SAFE.

Not everything
that's black,
yellow and
buzzes is a bee.

POLLINATORS PLAY A VITAL ROLE IN THE NATION'S FOOD SUPPLY CHAIN.

But, do you know the differences between good bees and potentially dangerous pests like hornets, wasps and yellowjackets? Stinging insects send more than half a million people to the emergency room each year* and some 2 million people are at risk of experiencing a life-threatening allergic reaction to insect stings.**

If you have a stinging insect problem, call us. We'll inspect your property, locate the nest or hive and identify the species. Our trained professionals can offer solutions for safely relocating honey bees to help protect beneficial pollinators and eliminate dangerous pests like hornets or wasps, leaving you with a safe home environment.
